

BURRA VIGNESWARA REDDY

burravigneswarareddy1845@gmail.com | +1 513 441 9229 | github.com/burravigneswarareddy | linkedin.com/in/vigneswara-reddy-burra-a87348245

Technical Skills

Forensic Security Tools: FTK Imager, Arsenal Image Mounter, Zimmerman Tooling, Wireshark, Autoruns, Event Viewer, VirusTotal, MITRE ATT&CK

Security Monitoring & Investigation: SIEM log review, alert triage, PCAP analysis, phishing email-header analysis, BEC investigation, Microsoft 365 sign-in logs, mailbox forwarding/inbox rules, credential compromise investigation, EDR concepts, vulnerability management support, firewall rule review, access control

Cloud, Systems Programming: AWS (EC2, S3, Lambda, IAM, VPC, CloudWatch), Python, SQL, Git, Docker, Windows, Linux

Work Experience

UNIZEN Technologies Pvt. Ltd.

Jun 2024 - Apr 2025

Software Engineer - Information Security

- Assisted with vulnerability scanning across internal systems, collected and documented evidence of findings in a structured log, and coordinated with relevant teams to support timely resolution.
- Reviewed security alerts and SIEM log entries to identify suspicious patterns, documenting potential indicators of compromise (IOCs) for escalation and further review.
- Supported phishing-email triage by analyzing email headers, reviewing sender domains, and checking URLs and file attachments against threat intelligence sources including VirusTotal.
- Completed a simulated Business Email Compromise (BEC) investigation exercise, reviewing Microsoft 365 sign-in logs, mailbox forwarding and inbox rules, and phishing email headers to reconstruct the attack chain and identify IOCs including impossible-travel logins, unauthorized mailbox rule changes, and suspicious sender domains.
- Performed a lab-based ransomware incident response exercise using Windows Event Logs, Registry artifacts, Prefetch, Amcache/Shimcache, and process execution data to triage initial access, persistence, and encryption activity; produced a MITRE ATT&CK-mapped incident report with containment steps and hardening recommendations.
- Performed basic network traffic analysis using Wireshark to identify anomalous connections, unusual protocols, and potential data-exfiltration indicators in controlled test environments.
- Assisted in reviewing firewall rule sets and access-control requests, flagging overly permissive rules and supporting documentation of approved configuration changes.
- Supported endpoint-security and patch-management activities by tracking patch status across assigned systems and verifying endpoint agent health in the security console.
- Documented security incidents, investigation timelines, IOC findings, and remediation steps in structured reports shared with the security team.

Fortinet (Supported Program)

Jan 2024 - Mar 2024

Network Security Associate - Virtual Internship

Remote

- Studied firewall rules, access control mechanisms, threat detection, and common network attack patterns.
- Analyzed security monitoring concepts aligned with incident response, risk mitigation, and enterprise defense practices.
- Developed understanding of how network controls support detection, containment, and cybersecurity incident prevention.

Education

University of Cincinnati

Cincinnati, OH

Master of Engineering in Computer Science | **GPA: 3.875**

2025 - 2027

KL University, Hyderabad

Hyderabad, India

B.Tech in Computer Science and Engineering | **CGPA: 8.51**

2021 - 2025

Projects

Serverless Notification System

Cloud / Serverless | AWS SNS, SES, Lambda, CloudWatch, S3, IAM

- Built a serverless event-driven workflow to send automated email and SMS alerts for simulated security events and system activity using AWS SNS and SES.
- Integrated Lambda triggers, CloudWatch monitoring, S3 for log storage and templates, and IAM role policies for least-privilege access control.

WhatsApp Chat Analyzer

Data Analytics | Python, Pandas, Matplotlib, NLTK, spaCy

- Developed a Python tool to extract, clean, and analyze WhatsApp chat export data, surfacing message-frequency trends, peak activity periods, and participant behavior patterns.
- Applied NLP preprocessing and visualization techniques to produce evidence-style interaction reports relevant to communication-pattern analysis.

Certifications & Training

- Cyber Security Incident Responder Path
- Fortinet Certified Associate in Cybersecurity
- AWS Certified Cloud Practitioner
- Microsoft Azure Fundamentals
- Microsoft Azure AI Fundamentals
- MongoDB Certified Associate Developer
- Oracle Certified Associate
